

Mineral Trioxide Aggregate based cement for endodontic retreatment and repair

REF 251160 :
MTA Caps 2 capsules Powder : 0.30gr
REF 213655 :
MTA Caps gun

Retrograde endodontic filling
Root canal perforation repair
Pulp capping
Apexification
Apexogenesis

MTA Caps is an outstanding root repair material which will completely set in the presence of moisture, ensuring its durability.

MTA Caps allows periradicular healing when used as a retrograde filling material in surgical endodontic procedures.
MTA Caps repairs root perforations: MTA Caps has real sealing ability over time.
MTA Caps used for effective pulp capping: Placing MTA over the exposed area allows healing and preservation of the vital pulp.
MTA Caps is the suitable material for apexification: In a single session, MTA Caps creates a permanent apical plug from the outset of treatment.

Unique features and benefits:

Available in a single dose capsules for fast and reliable mixing, saving valuable chair time:

- In the case of apexification, 5 minutes after placing MTA, the definitive obturation of the remaining 2/3 of the root canal space is performed.
- 5 minutes after MTA Caps has set the definitive or temporary cavity restoration is carried out.

With MTA Caps, endodontic repair and cavity restoration is carried out in the same stage without delay.
